Welded COIL SPRINGS

Our All-Rounders

- Made from a wide range of alloys
- Made to your dimensions

Plug connections (mechanical and electrical)

Tolerance compensation

Electromagnetic shielding (EMC)

Electrical contact points

Supporting elements for plastic seals

- Wire diameter 0.1 to 2.0 mm

Member of the KERN-LIEBERS Group
Materials of the Highest Quality
First Class Processing

Over 100 years of company history demonstrates our precision craftsmanship down to the smallest detail. Springs have been manufactured at Carl Haas since 1904, and we had built our own lasers by 1972.

Carl Haas GmbH is the precision engineering specialist in the processing of wire and bands as well as in plastic composite technology. From semi-finished to finished products, from spiral springs through mechanical springs, micro-turned parts, components and modules for minimally invasive surgery and stamped-bent parts to complex plastic composite parts, everything is delivered from a single source.

This has made us a trusted partner in the automotive, medical engineering and precision mechanics industries. With some 230 staff (including our foreign production companies) we are a member of the KERN-LIEBERS Group of Companies based in Schramberg, Germany.

Your personal adviser will be happy to develop tailor-made solutions with you, 100% customised to your application.
