

**Our environment is in need of protection and is our most valued asset.**

**Therefore we are committed to**

- **Managing and using resources sustainably.**
- **Reducing our energy consumption and increasing our energy efficiency through continuous improvement processes.**

**We adhere to**

- Requirements of our Management Systems, that we have established in compliance with the ISO 14001:2004 / AC:2009 and ISO 50001:2001 standards.
- Applicable legal and local government requirements for Environmental and Energy Management, occupational safety and health protection as they apply at our company locations.

**We pay attention to**

- Environmentally friendly design and monitoring of products and processes.
- Evaluation of environmental aspects, implementation of risk analysis, implementation and maintenance of improvements and corrective measures.
- Assessment of energy use and consumption of natural resources, including consideration of alternative energy sources.
- Measurement and verification of results through regular audits.
- Reduction of waste and waste water.
- Reduction and substitution of hazardous substances.
- Implementation of preventive measures, emergency preparedness and response.

**We inform**

- Our employees as well as contractors employees of contractors on our sites and promote their environmental and energy awareness.
- Our customers and discuss environmental specifications with regard on product design, recycling, disposal, packaging and transport.
- Our suppliers and service providers and take environmental and energy aspects into account when considering and making purchases.
