	Environmental and Energy Policy	

Environmental and Energy Policy

Our environment is our most valuable asset.

We therefore commit ourselves to

- Sustainable use of resources
- Reducing our energy consumption and increasing energy efficiency in a continuous improvement process
- to compensate our CO2 emissions

We adhere to

- The stipulations of our management system in compliance with the specifications defined in the ISO 14001 and ISO 50001 standards
- The applicable local legal obligations governing environmental and energy management and occupational health and safety

We emphasize

- Environmentally-friendly design and monitoring of products and processes
- The evaluation of environmental concerns, the implementation of risk assessments, and the implementation and maintenance of improvements and corrective actions
- The assessment of energy use and consumption, including natural resources and the possibilities for the use of alternative energy sources
- Measurement and review of results through regular audits
- Reduction of the quantity of waste and waste water
- Reduction and substitution of hazardous materials
- Implementation of preventive measures in the form of an emergency preparedness and response plan

We inform

- Our employees and the employees of other companies and encourage environmental and energy awareness
- Our customers and address environmental issues related to product design, recycling, disposal, packaging and transport
- Our suppliers and service providers and incorporate environmental and energy concerns into our purchase decisions
